PRINTS THAT “POP”

GFPHOTO is the original solvent printable photo paper that allows solvent printers to show off and deliver photo quality results. When a banner or poster paper just won't do, **GFPHOTO** can!

The secret is the super smooth coating layers that produce exceptional image quality. Images dry instantly and exhibit vivid colors that will not fade on display. This photo paper features a smooth, gloss finish that reproduces fine detail with striking accuracy. **GFPHOTO** is ideal for high resolution graphics, posters, photos/portraits, and fine art reproductions.

GFPHOTO is available in 7 and 10 mil (GPHOTO240).

How can you print GFPHOTO? **GFPHOTO** was specially designed for solvent, latex and UV printers to deliver stunning photographic results for every print.
