POSTERS THAT PACK A “PUNCH”

Are you still using a poster paper that was designed for early generation solvent & latex printers? Unlike a lot of poster papers that dry too slow for real production speeds, don't work well with newer generation printers or simply can't deliver the color accuracy, the **GFPOSTER** series is up to the task!

GFPOSTER has become the new standard for everyday printing for a wide variety of applications including general posters, general signage, retail advertising, photo reproduction, and wall murals. These premium coated papers are available in either a superior gloss (**GFPOSTER8G**) or smooth satin finish (**GFPOSTER8S**).

Also available in 5 mil (GFPOSTER5S).

How can you print GFPOSTER?

GFPOSTER is best printed with latex, eco-solvent, solvent, and UV printers.
