MAKE IT STICK WITH “STICK2”

STICK2 remodels any indoor environment, colorfully and easily, one wall at a time. The base film is stiffer and thicker than competitive films and the back features an easy release adhesive that makes installation or removal effortless.

STICK2 is a 6 mil polypropylene film with a smooth matte finish and a low tack back. **STICK2** starts with a premium PP base film that is tear resistant and allows for no edge cracking when folded. The Award-winning Magic® “Universal” coating creates excellent color gamut and black density.

How can you print STICK2?

STICK2 is best printed with dye printers, pigment, eco-solvent, solvent, and pagewide printers.

Tips & Tricks

The product should be fully tested by you to ensure success prior to surface application. Avoid surfaces with a pronounced texture (orange peel, knockdown or bumpy walls) before applying the product.
