

## **PRODUCT TRANSITION**

**772 / 471 - 20LB VELLUM CHANGE**

**771 / 472 - 17LB DISCONTINUATION**

In late 2017 the major supplier of cotton-based vellums supplying the North America market closed their mill production. Dietzgen has identified and qualified a new supplier for cotton-based vellum.

The new vellum will only be offered in 20LB as that represents the volume of vellum used today. The new vellum works well in both Inkjet and engineering printer platforms. We will use the existing part numbers (772 and 471) in order to minimize the impact of the transition. The “new” product is still 100% cotton-based paper. The formation, shade and smoothness characteristics have changed slightly but are still within the industry specifications for these grades and we expect a seamless transition.

Samples sheets of the new vellum are available by request through your sales representative. We apologize for any inconvenience this may cause and as always, thank you for your business.

Sincerely,

Mark Friedman  
Director of Marketing
